

UniTrack
UNILAG SHUTTLE

**Real-time shuttle tracking
for the University of Lagos**

The Problem

Where is the shuttle?

Students waiting at campus shuttle stops often don't know:

- ✪ Where the next shuttle is
- ✪ How long they will wait
- ✪ How crowded the queue is
- ✪ Whether waiting or walking is faster

Result: wasted time, uncertainty, and unnecessary waiting.

Our Solution

Meet UniTrack

A real-time shuttle tracking system built specifically for the University of Lagos campus commute.

UniTrack combines:

Live GPS + Queue Information + Travel Comparison

To help students make smarter transportation decisions.

UniTrack
UNILAG SHUTTLE

How It Works

Three steps. One smarter commute.

01 TRACK LIVE

See active shuttles moving on the campus map in real time.

02 CHECK THE QUEUE

Know the queue level and get a more realistic estimate of your wait.

03 DECIDE

UniTrack compares riding with walking and tells you which option gets you there faster.

Track. Check. Decide.

Campus Route

One loop. Six key stops.

Main Gate

Senate Building

Faculty of Science

Faculty of Engineering

New Hall

Sports Centre

Built for the Campus Commute

Use these numbers as big visual statistics:

INSTALLS REQUIRED

One System, Three Users

This is an important slide because it demonstrates that UniTrack isn't just a student interface.

STUDENT

Find → Track → Decide

Students view shuttle locations, queue information and travel recommendations.

DRIVER

Drive → Share → Update

Drivers share their live GPS position while on duty.

DISPATCHER

Monitor → Manage → Inform

Dispatchers manage routes and publish queue information.

What Makes UniTrack Different?

Instead of simply saying “we track buses,” make this your differentiator:

UniTrack doesn't just tell you where the shuttle is.
It helps you answer the question that actually matters:

“Should I wait or should I walk?”

IMPACT – *A better commute for students*

UniTrack helps students:

- ✳ **Save time** – Reduce unnecessary waiting.
- ✳ **Reduce uncertainty** – Know where the shuttle actually is.
- ✳ **Understand demand** – See queue conditions before committing to a wait.
- ✳ **Make smarter decisions** – Compare waiting with walking.

UniTrack
UNILAG SHUTTLE

One System, Three Users

Possible sections:

Frontend

Student, Driver & Dispatcher interfaces

Location

GPS-based shuttle tracking

Real-Time System

Continuous location updates

Data

outes, stops, queues and shuttle status

Deployment

Web-based application — no installation required

Future Improvements

What's next for UniTrack?

Potential future features:

- ✦ Push notifications when a shuttle is approaching
- ✦ Estimated arrival time improvements
- ✦ Occupancy/capacity information ✦ Mobile app/PWA
- ✦ More campus routes ✦ Trip history and analytics
- ✦ Accessibility improvements
- ✦ Historical traffic and demand analysis
